

## **KATY** Infrastructure

Katy ISD owns and controls a state-of-the-art fiber optic network which provides students, teachers, and staff high-speed access to an almost unlimited supply of online information and educational resources. WIFI in all classrooms and campuses throughout the district, allows students to use wireless laptops as well as conventional wired computers for projects. Plans are to expand WIFI capabilities at all campuses to provide public wireless access which is filtered for CIPA compliance. This access would allow for the expansion of technology equipment that is available to students by allowing them to use their personally-owned laptops and other devices that could connect to the Internet through a safe and secure network.
