

General Project Information

Katy High School Career & Technical Education Renovation

Project: Katy High School (KHS) Career and Technical Education (CTE) Renovation & Addition

Project Description: Renovation of the CTE area at KHS with a small building addition. This project was recommended in the 2014 Bond but not selected.

The CTE spaces at KHS are mostly located in the Vocational/V Hall:

- Three spaces for computer classes
- Welding and Construction Technology spaces
- Principles of Human Services
- Child Development/Fashion/Interior Design
- Three spaces for Agricultural Sciences
- Two spaces for Floral Design

There are two business classes in adjoining B Hall and Photography is held in C Hall.

Project Priority: 1

Background & Justification:

- Safety in the shop areas must be addressed with the use of modern technology there is not enough electricity to run the equipment that is currently in place. The space makes for an unsafe work environment with the number of students currently enrolled in classes.
- Classrooms need to be designed with computer labs available.
- Additional flexible learning areas to facilitate project based learning, as currently there is not enough space for this to happen.
- The shop areas need to be expanded to accommodate the number of students now enrolled in shop classes. There is no overhead door in one shop thus eliminating the access of moving projects out of the shop to a location.
- Teacher workroom and office space was built for three teachers. Now with the growth that has already occurred they have outgrown these spaces which compromises space for confidential records, supplies, etc.
